No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

selectable marker region capable of being expressed in the recipient cell
; and (c) a chimeric DNA construct comprising: (i) promoter or promoter
ce region capable of being recognized by RNA polymerases of a eukaryotic
cell or by prokaryotic RNA polymerases; (ii) first, second, third and
colyademylation region functional in the eukaryotic cell. The first and
colyademylation region functional in the eukaryotic cell. The first and
control recombination sites, or the eukaryotic cell. The first and
courth recombination sites, or the same recombination site, and preferably
are capable of reacting with a same recombination site, and preferably
care identical. The first and second recombination site, or the third and
cfourth recombination sites, do not recombine with each other or with a
capable stranded RNA which can be used for silencing large amounts
cc double-stranded RNA which can be used for silencing large amounts
cc acid sequences. The vectors can also be used to convert a DNA fragment
into an inverted repeat structure. Plants transformed with a vector from
correspond to the present invention can be used in a conventional breeding scheme to
convert produce more plants with the same characteristics or to introduce a
chimeric gene for reduction of the phenotypic expression of nucleotide
canners from the present sequence represents an acceptor vector nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     16645
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               16585

```

The present invention describes a vector (I) comprising operably linked DNA fragments having: (a) origin of replication allowing replication in a recipient cell, preferably in bacteria such as Escherichia coli; (b)

Claim 15; Page 74-83; 104pp; English.

silencing tar stranded RNA

The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid comprising one or more recombination sites with a target the first population to recombine with the first target nucleic acid molecules of molecules to form a second population; (c) mixing the second population of nucleic acid with a second target nucleic acid, and (d) causing some or all of the nucleic acid molecules of the second population to or all of the nucleic acid molecules of the second population to frecombine with some or all of the second target nucleic acid molecules to form a third population of nucleic acid. The method is useful for selecting and isolatang nucleic acid molecules. The present sequence represents the destination plasmid pDONNE212(R) nucleotide sequence
                                                                                                                                    Inserting a population of nucleic acids into a second target molecule for selecting and isolating nucleic acid molecules by mixing the second population of nucleic acid with a second target nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  509
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      209
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GCCAACTITGTACAAAAAAGCTGATATCGAAACGTAAAATGATATAAATATCAATATTT 149

The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid, (b) causing some or all of the nucleic acid molecules of mucleic acid, cb) causing some or all of the nucleic acid molecules of mucleic acid for a second population, (c) mixing the second population of nucleic acid, and (d) causing some of nucleic acid, and (d) causing some or all of the nucleic acid molecules of the second population to recombine with some or all of the second target nucleic acid molecules to recombine with some or all of the second target nucleic acid molecules to selecting and isolating nucleic acid molecules. The method is useful for selecting and isolating nucleic acid molecules. The present sequence represents the destination plasmid pDONN212(F) nucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAATTAGATTTTGCATAAAAAAAAGACTACATAATACTGTAAAACACAAACATATCCAGTC 145

The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid, (b) causing some or all of the nucleic acid molecules of molecules to form a second population, (c) mixing the second population of nucleic acid with a second population, (c) mixing the second population of nucleic acid with a second target nucleic acid, causing some or all of the nucleic acid molecules of the second population to or all of the nucleic acid molecules of the second population to from a third population of nucleic acid. The method is useful for selecting and isolating nucleic acid molecules. The present sequence represents the destination plasmid pDONR212 nucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Inserting a population of nucleic acids into a second target molecule for selecting and isolating nucleic acid molecules by mixing the second population of nucleic acid with a second target nucleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TGTTCTTCGGGTGATGCTGCCAACTTAGTCGACGACGGCCTTCCAAATGTTCTTCTCAA 265

from the present invention are used for the recombinational cloning of nucleic acid molecules. They can be used for changing vectors, targeting c gene products to intracellular locations, cleaving fusion tags from desired proteins, operably linking nucleic acid molecules of interest to regulatory genetic sequences, constructing genes for fusion proteins, c changing copy number, changing replicons, cloning into phages and cloning. (I), (III), (III), host cells and vectors can be used in the coduction of polypeptides and antibodies. The present sequence is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid, (b) causing some or all of the nucleic acid molecules of the first population to recombine with the first target nucleic acid molecules of nucleic acid with a second population; (c) mixing the second population of nucleic acid with a second target nucleic acid, and (d) causing some or all of the nucleic acid molecules of the second population to form a third population of nucleic acid molecules to form a third population of nucleic acid. The method is useful for selecting and isolating nucleic acid molecules. The present sequence

att recombination site. (I), (II), primers, vectors and methods from the present invention are used for the recombinational cloning of mucleic acid molecules. They can be used for changing vectors, targeting gene products to intracellular locations, cleaving fusion tags from regulatory genetic sequences, constructing genes for fusion proteins, changing copy number, changing replicons, cloning into phages and cloning (I), (II), host cells and vectors can be used in the production of polypeptides and antibodies. The present sequence is used in the exemplification of the present invention

Also described are: (I) an isolated nucleic acid molecule (II) comprising one or more att recombination sites comprising at least one mutation in its core region that increases the specificity of interaction between the recombination site and a second att recombination site, and (2) an isolated nucleic acid molecule (III) comprising one or more mutated att recombination sites comprising at least comparison between a first nucleic acid molecule comprising the mutated att recombination site and a second nucleic acid molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                attP2,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bacteriophage lambda; att; recombination site; attB; attR; attL; attL; mutant; recombinational cloning; entry vector; destination vector;

                                                                                                                                                                                                                                                                                                                        The invention relates to inserting a population of nucleic acids into a second target molecule. The method involves (a) mixing a first population of nucleic acid comprising one or more recombination sites with a target nucleic acid, comprising some or all of the nucleic acid molecules of the first population to recombine with the first target nucleic acid molecules of nucleic acid with a second population, (b) mixing the second population of nucleic acid with a second molecules of the second population to recombine with population to all of the second target nucleic acid molecules to form a third population of nucleic acid. The method is useful for selecting and isolating nucleic acid molecules. The present sequence

                                                                                                                                                                                                                                                                                                                                                             ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes isolated nucleic acid molecules (I) encoding an attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, attB2, attB1, and attB2 nucleotide sequence. Also described are: (I) an isolated nucleic acid molecule (II) comprising one or more att recombination sites comprising at least one mutation in its core region that increases the specificity of interaction between the recombination sites and (2) an isolated nucleic acid molecule (III) comprising one or more mutated att recombination sites comprising at least one mutation in its core region that enhances the efficiency of recombination between a first nucleic acid molecule comprising the mutated att recombination site and a second nucleic acid molecule comprising as second recombination site that interacts with the mutated comprising a second recombination site that interacts with the mutated from the present invention are used for the recombinational cloning of nucleic acid molecules. They can be used for changing vectors, targeting concluding notion intracellular locations, cleaving fusion tags from desired proteins, operably linking nucleic acid molecules, constructing genes for fusion proteins, crequinces, constructing genes for fusion proteins, crequinces, constructing genes for fusion proteins,

The present invention describes a vector (I) comprising operably linked DNA fragments having: (a) origin of replication allowing replication in a recipient cell, preferably in bacteria such as Escherichia coll; (b) selectable marker region capable of being expressed in the recipient cell; and (c) a chimeric DNA construct comprising: (i) promoter or promoter cell or by prokaryotic ENA polymerase; (ii) first, second, third and fourth recombination sites; (iii) 3' transcription terminating and courth recombination sites; (iii) 3' transcription terminating and courth recombination sites, or the second and third recombination sites, or the second and third recombination sites, or the second in the combination sites, and second recombination site, and preferably are identical. The first and second recombination site, and preferably are identical. The first and second recombination site, or the third and same recombination sites, or he to recombination site, and preferably of double-stranded RNA which can be used for silencing target nucleic acid sequences. The vectors can also be used to convert a DNA fragment into an inverted repeat structure. Plants transformed with a vector from the present invention can be used in a conventional breeding scheme to produce more plants with the same characteristics or to introduce a
